

RENOVATION OF THE CIRCULATING SYSTEM FOR THE MAGALINI HOSPITAL

WHERE:

The hospital, located in the town centre, has a fairly wide catchment area that also includes towns belonging to the municipalities adjacent to **Villafranca**. The work was necessary due to a fire that had partly ruined the system 12 years ago. The hospital took advantage of this opportunity to carry out modernisation also from the point of view of energy saving.

WHEN:

February 2016

THE REQUEST:

MODERNISATION OF PUMPS FOR THE HEATING PLANT AND WASTE WATERS

The project considered work both for the climate control circulation system and for cold water, installing various CM, KLP, NKM-G and KDN pumps and a 3-pump inverter unit.

The waste water management system was also revised, with 4 FEKA 8000 and 2 Feka 6000.

- NKM-G

- KDN

- CM e KLP

- 4 FEKA 8000

- 2 FEKA 6000
