

AN ORIENTAL PEARL ALONG THE YANGZE RIVER

WHERE:

Nanjing, the capital of Jiangsu Province, is the second largest city in the East China region. Its name, which literally means 'Southern Capital', has ancient and deep roots: Nanjing is, in fact, one of the 'Four Ancient Great Capitals of China', and it was home to different prestigious dynasties and governments from the 3rd century up to year 1949. Glimpses of the city's shining cultural heritage and of its breathtaking landscapes can be captured walking along the Yángzi Jiang (Yangze River) into the Confucious Temple, looking up to the majestic Ming City Walls, climbing the ancient Drum Tower and listening to the spring that bubbles up from the rocks in the Pearl Spring Park. Situated in the heart of the city is another Chinese pearl, the Grand Hongjia Yiju Hotel: thanks to its privileged position and its high-standard services, this hotel enjoys widespread appreciation among its customers.

WHEN: December 2014

CONTRACTOR: Nanjing Yaosheng Mechanical and Electrical Equipment Co., Ltd.

CLIENT: Grand Hotel Management Group

THE REQUEST

The Grand Hongjia Yiju Hotel Nanjing Yaosheng always has their clients at heart, especially when considering their physical and mental well-being: this is why it has chosen to cooperate with an important trading company, the Nanjing Yaosheng Mechanical and Electrical Equipment. This enterprise was established ten years ago, and it deals with the distribution of imported water pumps mainly, providing also excellent sales and after-sales services.

The project involves sewage treatment in each room of the hotel, with the total amount of 55 bathrooms: being the main drainage ditch on the basement (1st floor) and some of the rooms lower, efficient sewage lifting devices are needed in order to lift the waste to the main line. According to these needs, a GENIX 130 (flow: 3 m³/hour; head: 5 m) has been installed in each room.

It is relevant to underline that the chosen product has numerous characteristics that make it unique and, most of all, reliable: first, in this hotel's installation, the basin and the pipes have been covered in a marble box (of course, the marble panel can be opened) for an aesthetically pleasant result; second, its operation is almost completely silent – no one will notice it is working. Finally, it has a very powerful grinder and requires little and very easy maintenance.

One might say it is also thanks to this innovative installation that the hotel customers can rest, while the gentle and ancient water of the Yangze River rocks them to sleep.

55 x GENIX 130
