**AFFORDABLE WEB
BASED REMOTE
CONTROL FOR
EVERYONE**

DAB[®]
WATER • TECHNOLOGY

YOUR SYSTEMS ARE JUST A CLICK AWAY

THE SERVICE THAT MAKES LIFE EASIER

DConnect makes monitoring DAB products easy and intuitive. All adjustments are also possible remotely. For total control with no surprises.

IMMEDIATELY READY TO USE

DConnect does not require specific infrastructures. The installation only requires an internet connection and a smartphone. Just follow the few steps of the connection wizard to connect your pumps.

TECHNOLOGY FOR EVERYONE

Based on state-of-the-art technology, the DConnect system offers many advantages than typical BMS systems.

WE ARE VERY CAREFUL ABOUT YOUR SAFETY

Dab takes data safety very seriously. This is why DConnect products are continuously updated and improved, to make sure that they always comply with the latest standards, in order to counteract any effects of the new dangers that are discovered every day.

UNRIVALLED ADVANTAGES

DConnect

<p style="text-align: center;">TAILOR DESIGN</p> <p>Developed for both residential and commercial building service application.</p>	<p style="text-align: center;">USE</p> <p>No fixed work station is required as the DConnect is all about portability, the only thing you need is a internet connection.</p>
<p style="text-align: center;">SOFTWARE & HARDWARE</p> <p>You do not need to buy any expensive software, nor do you need to pay for updates or for dedicated work stations.</p>	<p style="text-align: center;">VALUE</p> <p>It lowers the overhead costs, increasing the value of your building.</p>

D+CONNECT BOX

DConnect Box 2 expands the range of DConnect products. This latest addition is the ideal solution for small systems (connection of up to 4 products). It joins big brother DConnect Box, which can manage larger systems (connection of up to 8 products), and is compatible with a wide range of DAB products. Both can also be used on already installed products. All that is required is constant internet access at the place of installation.

APP & CLOUD

Using the DConnect App, available on App Store and Google Play, it is possible to check the settings of compatible products.

Taking advantage of the Cloud service, through the website internetofpumps.com or the **DConnect App**, it is also possible to remotely check the installation and receive alarms in real time, wherever you are, through an extremely clear and functional user interface.

INTERNETOFPUMPS.COM

A SINGLE INTERFACE FOR EVERY APPLICATION

DConnect is suitable for pressurization systems, circulation systems and for installations for the recovery of waste water.

IT represents a high added value service that can be used with any system, irrespective of its nature and size and in the same environment and with the same instruments, from the individual villa to large structures.

Being modular, DConnect can manage up to 8 different electronic pumps in a highly simple and integrated manner.

HEATING

CONDITIONING

RAIN WATER

GARDENING &
IRRIGATION

WATER BOOSTING

WASTE WATER

SMART BUILDING MANAGEMENT

DConnect permits easier, controlled and more rational management of the system, lowering the overhead costs and increasing the absolute value of the building in terms of efficiency and overall comfort.
